

NCR APTRA™ OptiVLM

Want easy access to cash ordering information?

YES

Enjoy complete visibility of your cash ordering data

NCR APTRA OptiVLM is a modular web application that allows financial institutions to track cash ordering information from a variety of sources, including ATMs, branches, the Central Bank, commercial customers, and other banks and external vaults. Designed to easily integrate with any cash management system, APTRA OptiVLM provides a complete view of your cash ordering position and can be customized to address the unique requirements of your financial institution.

- **Easy integration with cash management systems**

APTRA OptiVLM provides the greatest benefit when implemented as part of the APTRA Cash Management solution, however, APTRA OptiVLM is a standalone module and can interact with any cash management system to provide superior order tracking capabilities.

- **A complete order picture**

APTRA OptiVLM manages cash orders from all sources, providing a complete picture of overall cash status throughout the supply chain. Users can load orders and order status directly into the application interface or simply upload standard layout formats. When implemented with APTRA Cash Management solutions, APTRA OptiVLM interacts with the main vault system to consolidate information which is then transferred to APTRA OptiVault for forecasting.

- **Keep control of invoices**

APTRA OptiVLM enables users to keep control of invoice validation, vault balancing, carrier compliance and commercial customer charges. Flexible, user-defined workflows allow users to customize the application to meet their needs, ensuring that APTRA OptiVLM brings the most value to your financial institution.
